

Stroke

Relevant articles from MA Healthcare journals to support your staff's education and practice

June 2018

Both the diagnosis and care of stroke victims is a key issue for health professionals in the UK; today there are over 1.2 million stroke survivors that are discharged from hospitals who need care. It is a condition that is currently one of the largest causes of disability, and one third of survivors require help with daily activities from others, such as professional carers, family and friends.

We have provided a list of relevant articles from MA Healthcare journals dealing with stroke, thereby providing your NHS staff with research, information and tips that will support both their work and their patients.
